CENTRAL INTELLIGENCY AGENCY

constructed, and tested. A large staff of engineers and technicians have at their disposal a vast library culled from western sources, and the research files of the former Siemens company. The Siemens archives contain data for the production and design of transmitters, transformers, coils, measuring instruments, and transmitter stations. As a result of this body of technical information available to the Tesla company, Tesla production is based mainly on Siemens products.

- 6. The Development Department consists of five divisions:
 - a. Physical research division, which works on theoretical mathematical and physical problems.
 - b. Receivers division, where receivers, especially for aircraft, are constructed.
 - c. Transmitter division, where research on theoretical and practical problems of ultra-short waves is done.

onducts research on gramophones

wire amplifiers in a range of 300-3,400 cps, amplifiers EGIB carrier systems in a range of 12-108 kc/s, and an impulse

devices already developed by the Tesla Development Department:

- a. A device has been developed to tap telephone calls and to transcribe the conversations on records. As many as 20 calls at a time can be recorded on two discs. This machine is an exact copy of one developed by Siemens.
- b. Communication by means of a coaxial cable is being studied. A plan has been conceived to construct a magistral across all of Czechoslovakia, but the research on this project has just begun. Step-up trepeatemer stations will have to be built along the route.
- c. A network making use of a carrier system (Standard type SOJ 12, Siemens MG 15 and BOA 12) is to be built in Bohemia and Moravia with connections leading into all of the town networks. Dialing of long distance telephone calls will be possible.
- d. At Pardubice, Tesla engineers are trying to improve the French-type ultra-short wave equipment. Test equipment is being used between the sending station on the Petrin hill in Prague and a receiving station on the Snezka mountain (P50/N 26) in the Krkonose Mountains. The telephone systems of Prague and Trutnov (O51/G 74) have been connected to this net, and dialing is automatic between these two points, It is planned to extend this net into Poland.

f. Work is going forward on a sending and receiving set for communication between aircraft. The set is called "skrivanek" (nightingale).

ment, but his progress has been so slow that production

8. Prague Tesla factories and their locations are:

will not be started until 1951.

- a. Prague-Hloubetin, Podebradska ulice 186, Workshop I (formerly Phillips). Produces commercial radio receivers trademarked Kongres, Kvinta, Melodik, Talisman, Romance, and Rytmus.
- b. Prague-Hloubetin, Workshop II (formerly Phillips). Produces radio tubes for commercial receivers and for technical purposes.*
- c. Prague-Hloubetin, Workshop III (formerly Always). Produces and develops miscellaneous electrical parts such as condensers and resisters.
- d. Prague-Vrsovice. Produces all types of transmitters.
- e. Prague-Karlin (formerly Siemens), Kralovska ulice 84-86. Produces telephone systems.
- f. Prague-Holesovice (formerly Osram). Produces electric light bulbs.
- g. Prague-Strasnice, No. 800 (formerly Mikrofona). Development laboratories are located here. In addition, this plant produces dial telephone sets, telephones used in mines, and "Pupin cases" (**id).
- h. Prague-Strasnice, No. 987 (formerly Sixka). This is a research and development center.
- i. Prague-Bechovice. Produces mechanical parts.
- 9. Tesla factories outside of Prague are:
 - a. Pardubice (051/M 79) (formerly Telegrafia). Produces special radio sets, telephone exchanges, and telegraphic equipment. Research laboratories are also located here.
 - b. Vrchlabi (Hohenelbe 051/G 55) (formerly Lorenz, Berlin). Produces tubes and does research on tubes and vacuum techniques.
- 10. Minor Tesla factories outside of Prague are:
 - a. Valasske Mezirici (P50/0 34) (formerly Mikrofona)
 - b. Prelouc (051/M 58) (formerly Radiotechna)
 - c. Brno (P50/N 40) (formerly Siemens)
 - d. Liberec (051/G 16), Na rybnicku 6 (formerly Siemens)
